

The Ergonomic Photo (EPH) system

The “EPH” system is both modular and versatile. You can connect a bag or pack that is part of the EPH system to another bag or link 2-3 bags together.

Torso-pack + Backpack configuration

The torso pack **T-212/214** enables frontal carrying for quick access to your Camera and essential gear, while the backpack stores all additional equipment.

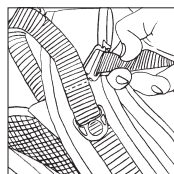

Attachment stages:

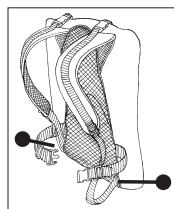

- Find and disconnect the 3 straps supplied with the **T-212/214**. On one side of the strap you will find a “slik-clip” buckle (A) and on the other side a side release buckle (B).

- Connect the slik-clip buckle to the backpack's left shoulder strap.

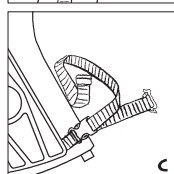

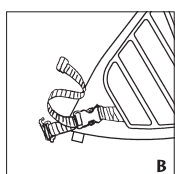

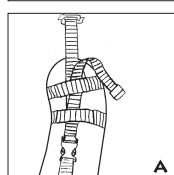

- Connect the remaining 2 slik-clip buckles to the loops on the lower left and right sides of the backpack.

- Reconnect the side 3 release buckles (A, B and C) to the **T-212/214**.

Adjust the height by setting the upper strap (A) and then tightening the 2 straps (B and C) to secure the **T-212/214** in a convenient position. Now you are all set. All you have to do is open the right side release buckle (B), and you can put on and take off the whole system without changing the adjustments.

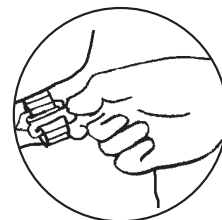

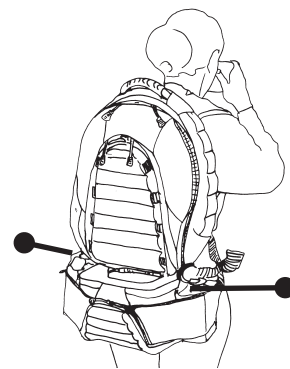

Waist-pack + Backpack configuration

The **EPH** system enables you to attach the **W-92/4** to **R-101/2/3**, **RL-302** backpacks.

This configuration lets you create a larger backpack that provides better weight distribution between the shoulders and the hips. The waist pack's main compartments stays accessible - no need to detach the bags.

Connect the slik-clip buckles on the bottom of the backpack to the designated tabs on the **W-92/4** waist pack.

Note: You can disassemble the hip belt before attaching the **W-92/4**.

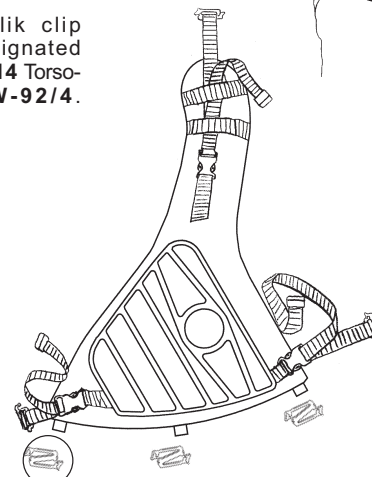

Waist-pack + Torso-pack configuration

This configuration can be carried with a back pack or by itself, using the provided back mesh harness.

Connect the 3 slik clip buckles to the designated tabs on the **T-212/214** Torso-pack and the **W-92/4**.
